€ 3,719,550.00

€ 3,719,550.00

SHORT DESCRIPTION OF THE PROJECT:

The project presents a novel very short-range air defence system (VSHORAD) solution using electromagnetic pulse (EMP) capable shells.

SENTINEL seeks to pioneer VSHORAD technology in the medium-calibre domain for anti-drone defence, offering a versatile and scalable system compatible with various military platforms. The EMP payload within the shell will create a high power EMP that disables uncrewed aerial systems by destroying their electronic or electrical circuits within a sphere of a few meters from the detonation. It is highly scalable with a firing rate of at least 50 rounds per minute, overcoming the limitations of existing missile-based interceptor ground-to-air defence systems
